Projektbeschrieb

This project funds the development of an SNF Sinergia proposal. Since the start of the ITC funded project, our research has led us to focus on the gap of studies on the use of Voice Assistants and their role in changing everyday practices and routines as well as their implications for work. SNF proposal is in its final submission stage and will be submitted June 1st. New project partners include the Mozilla Foundation, FH StGallen and Dundee University. The SNF Sinergia Project will run 48 months and ask for 2.4 Mio. CHF.

Addendum: The Sinergia Proposal was submitted June 3, 2019. The decision is due in December 2019. The ITC Project also led to a submission with the SNF NFP 77 'Digital Transformation', Subrgroup Trust and Ethics. The initial project sketch "Addressing Trust Issues in Digital Health through Human-centered Design was invited to be developed into a full proposal due September 9, 2019. Other opportunities are now being pursued for third party funding.
